

SKU-0207

Products with 3D printing

TIP

version:
black / gray

We recommend using a filler (DodyFill 360) that covers the print lines on the product. You can then sand the surface with sandpaper for a smooth surface. If the product is designed for a functional model in water, all surfaces of the product must be colored by the filler.

example

Do not expose to direct sunlight.

The printing material is PLA. This is the same material as the RC models of aircraft. yet it is not recommended to leave it in the sun.
